<u>CONTENTS:</u>

COMMANDS:

- > CREATE
- > DESCRIBE
- > INSERT INTO
- > UPDATE
- > AS
- > DSITINCT
- > ORDER BY
- > WHERE clause
- > SELECT COMMAND
- > ARITHMETIC OPERATORS
- > RELATIONAL OPERATORS
- > LOGICAL OPERATORS
- > AND BETWEEN
- > IN
- > LIKE
- > NULL and NOT NULL
- > AGREGRATE FUNCTIONS
- > GROUP BY
- > HAVING

IMPLEMENTATIONS OF DIFFERENT COMMANDS ON MYSQL;

COMPANT DATABASE:

First of all create database which you want to made as per according to your desire by using the syntax.

Syntax:

CREATE DATABASE DATABASE_NAME;

o Use your already made database as by use the words as;

Syntax:

USE database_name:

> CREATE command:

It's used for the creation of tables.

Evolving the following statement;

Syntax:

CREATE TABLE TABLE_NAME(COLUMN_1,COLUMN_2....);

Example:

Create tables of employee, department and grade.

Grade table:

```
mysql> use company;
Database changed
mysql> create table grade( Grade_id INT(4) PRIMARY KEY , Low_Salary INT(254) NOT NULL ,Higher_salary INT(254) NOT NULL);
Query OK, 0 rows affected, 3 warnings (0.04 sec)
```

Department table:

```
mysql> create table department(dep_no INT(8) PRIMARY KEY , dep_name varchar(254) NOT NULL);
Query OK, 0 rows affected, 1 warning (0.03 sec)
```

 As the department and the grade table are made earlier as before the employee table because their PKs becomes the FKs in that employee table.
 Additionally they both acts as the parent tables for the child table which is employee.

0

Employee table:

Use of DESCRIBE COMMAND:

It's also can be used as the **DESC** shortly.

Syntax:

DESC TABLE_NAME:

Examples:

Employee table:

Field	Type	Null	Key	Default	Extra
e_name	varchar(254)	NO		NULL	
JOB	varchar(254)	NO	j	NULL	ĺ
Hire_date	date	NO	j i	NULL	ĺ
salary	varchar(254)	NO	j i	NULL	ĺ
Commession	varchar(254)	YES	İ	NULL	ĺ
dep_no	int	NO	MUL	NULL	ĺ
Grade id	int	NO	MUL	NULL	ĺ

Department and Grade tables:

> INSERT COMMAD:

Syntax:

INSERT INTO TABLE_NAME VALUES (COLUMN_1'S VALUES,C_2,.....);

Example:

Grade table:

```
mysql> INSERT INTO grade VALUES (1 , 2637,7752),(2,3728,3776),(3,4732,9873);
Query OK, 3 rows affected (0.01 sec)
Records: 3 Duplicates: 0 Warnings: 0
```

Department table:

```
mysql> INSERT INTO department Values(11 , "IT"),(12 ,"CS"),(13,"MRKT");
Query OK, 3 rows affected (0.01 sec)
Records: 3 Duplicates: 0 Warnings: 0
```

Employee table:

```
mysql> INSERT INTO employee Values("Arhum","SI","2004-03-09","26537",NULL,11,1,31);
Query OK, 1 row affected (0.01 sec)

mysql> ^C
mysql> ^C
mysql> INSERT INTO employee Values("Murat" ,"CONSTBLE","2003-9-28","7538",NULL,12,2,32);
Query OK, 1 row affected (0.01 sec)

mysql> INSERT INTO employee Values("Faiza","COMMANDO","2007-02-19","9872",NULL,13,3,33);
Query OK, 1 row affected (0.01 sec)
```

>SELECT * command:

This command is used for the displaying all and every single attribute's **values** on the command prompt.

Syntax:

SELECT • FROM TABLE NAME:

Example:

Employee table:

e_name	JOB	Hire_date	salary	Commession	dep_no	Grade_id	e_no
Arhum	SI	2004-03-09	26537	NULL	11	1	31
Murat	CONSTBLE	2003-09-28	7538	NULL	12	2	32
Faiza	COMMANDO	2007-02-19	9872	NULL	13	3	33

Department and grade tables;

> SELECT one/multiple column :

This command is beneficial at that support while you are dealing with to come out the single one and the multiple attributes from a table rather then all of the attributes. Only a **certain** or **specific** values will be come out by this.

Syntax;

SELECT COLUMN_NAME FROM TABLE_NAME;

Example:

```
mysql> select Grade_id from grade;
+-----+
| Grade_id |
+-----+
| 1 |
| 2 |
| 3 |
+-----+
3 rows in set (0.00 sec)
```

>ALTER command:

Used to alter the table and including other attributes or **inserts** more data into the table.

Syntax:

ALTER TABLE TABLE_NAME ADD COLUMN_NAME CONSTRAINT;

Example:

	ows affected (0 uplicates: 0 W				
sql> desc en	nployee;				
Field	Туре	Null	Key	Default	Extra
e_name	varchar(254)	NO NO		NULL	
JOB	varchar(254)	NO		NULL	i i
Hire_date	date	NO		NULL	
salary	varchar(254)	NO		NULL	
Commession	varchar(254)	YES		NULL	
dep_no	int	NO	MUL	NULL	
Grade_id	int	NO	MUL	NULL	
e no	int	NO	PRI	NULL	auto increment

Suppose we want to include the already present table EMPLOYEE the PRIMARY KEY. Then for the sack of that purpose we use:

AS COMMAND on MySQL:

This is basically used to make an alias of the attribute. It's helpful where you want to access the already attribute name with the new one as you want.

Syntax:

SELECT COLUMN_NAME AS ALIAS FROM TABLE_NAME:

Example:

> DISTINCT COMMAND:

This command is used for duplicacy removal from your table if exist.

Syntax:

SELECT DISTINCT COLUMN_NAME FROM TABLE_NAME:

```
mysql> select DISTINCT dep_no from employee;
+------+
| dep_no |
+------+
| 11 |
| 12 |
| 13 |
```

> WHERE clause in SQL:

Where command is work as such like fro the condition.

Syntax:

SKLECT • FROM TABLE_NAME WHERE COLUMN="YALUE";

Example:

e_name	0 Command Lir	_date :							+
l row in s	et (0.01 se	ec)							+
e_name	JOB	Hire_date	e sa:	lary	Commession	dep_no	Grade_i	ld e	e_no
	COMMANDO	2007-02-	19 987	72	NULL	13		3	33
nysql> sel	et (0.00 se .ect e_name (0.00 sec)	ec)			_no=4;	+	+	+-	+

> ORDER BY command:

It's used for the ascending or descending order sorting. By default ascending sort is done by the complier.

Syntax;

SELECT COLUMN_NAME FROM TABLE_NAME ORDER BY COLUMN_2 DESC;

Example:

```
nysql> select JOB ,e_name from employee;
JOB
          e name
SI
            Arhum
 CONSTBLE
            Murat
 COMMANDO
            Faiza
            Fazan
rows in set (0.00 sec)
nysql> select e_name from employee ORDER BY salary DESC;
 e_name
 Faiza
 Murat
 Fazan
 Arhum
 rows in set (0.00 sec)
```

> <u>OPERATORS IN SQL:</u>

Arithmetic operators including (+,-,*,/).

Syntax:

SELECT COLUMN_NAME OPERATOR FROM TABLE_NAME WHERE COLUMN_NAME="VALUES";

Or

SELECT COLUMN_NAME FROM TABLE COLUMN_NAME OPERATOR ANYOPERATION;

```
MySQL 8.0 Command Line Client
rows in set (0.00 sec)
nysql> select salary-200 from employee where e_no=31;
 salary-200 |
     26337
1 row in set (0.00 sec)
nysql> select salary+200 from employee where e_no=32;
salary+200
      7738
1 row in set (0.00 sec)
nysql> select salary+250*12 AS anuual_salary from employee ;
 anuual_salary |
         29537
         10538
         12872
         10263
4 rows in set (0.00 sec)
```

> Relational operators:

These operators including (>,< ,>=,<=,==,!=)

Syntax:

SELECT COLUMN_NAME OPERATOR FROM TABLE_NAME WHERE COLUMN_NAME="YALUES";

Or

SKLECT COLUMN NAME FROM TABLE NAME WHERE COLUMN OPERATOR CONDITION;

Logical Operators:

AND, OR, NOT.

> <u>SQL QUERIES BY AND, OR</u> <u>OPERATOR:</u>

```
mysql> select * from employee where (e_name="Arhum" AND salary=26537);

| e_name | JOB | Hire_date | salary | Commession | dep_no | Grade_id | e_no |

| Arhum | SI | 2004-03-09 | 26537 | NULL | | 11 | | 1 | 31 |

1 row in set (0.00 sec)

mysql> select Low_Salary from grade where (Grade_id=1 OR Grade_id=2);

| Low_Salary |

| 2637 |
| 3728 |

2 rows in set (0.01 sec)
```

> USE OF MULTIPLE AND OPERATOR:

```
nysql> select JOB="SI" from employee where(salary>=1900 AND salary<=21000);
 JOB="SI"
        0
        0
3 rows in set (0.00 sec)
nysql> select JOB="SI" from employee where(salary>=1900 AND salary<=21000);
 JOB="SI"
        0 |
3 rows in set (0.00 sec)
mysql> select JOB from employee where(salary>=1900 AND salary<=21000);
 JOB
 CONSTBLE
 COMMANDO
 SI
3 rows in set (0.00 sec)
mysql> select e_name from employee where (JOB="SI" AND salary >=1900 AND salary<=21000);
 e_name
 Fazan
1 row in set (0.00 sec)
```

>AND BETWEEN:

It's used where you want to evaluate the values from the range. Within that specific range.

Syntax:

SELECT * FROM TABLE_NAME WHERE (COND_1 AND COND_2 BETWEEN COND_3);

As you can use any column_name rather then the asterisk inside the query.

Example:

• OR BETWEEN is same as that of the AND BETWEEN.

> IN COMMAND:

It's use to come out the certain value from the list of the table. It's basically used to reduce length which is taken by multiple AND or OR operators.

Syntax:

SELECT COLUMN_NAME FROM TABLE_NAME WHERE COLUMN_NAME IN (V_1,V_2) ;

Examples:

>LIKE COMMAND:

As if you want to evaluate a specific personality from a table whose spelling you are specifying in the query or any other name whose end or start or at any middle element you'll be mentioned by you. This command is beneficial at that spot while you want to take a name whose character you'll not be known is advanced.

> Wildcard Characters;

- %(Represents the single ,null or multiple characters)
- o _(Represents a single character)

Syntax:

SELECT C_1,C_2 FROM TABLE_NAME WHERE C_NAME LIKE PATTERN; Example:

> **NULL:**

AGGREGRATION FUNCTIONS:

- COUNT(COLUMN_NAME)
- COUNT(*)
- AVG(COLUMN_NAME)
- MAX(COLUMN_NAME)
- MIN(COLUMN_NAME)
- SUM(COUMN_NAME)

> **COUNT COMMAND:**

- **COUNT(*)** will display the all the colums which is include in your tables including the **null** values and also the **duplicate** values.
- **COUNT(column_name)** will display ONLY the **singly** values and not null vaues.

> A VERAGE FUNCTIONS:

Syntax:

SELECT AVG(COLUMN_NAME) FROM TABLE_NAME;

OTHERS functions:

GROUP BY:

• If you want to view groups of two different attributes.

```
mysql> select AVG(salary) from employee GROUP BY JOB ,dep_no;

+------+

| AVG(salary) |

+-----+

| 26537 |

| 7538 |

| 9872 |

| 7263 |

+------+

4 rows in set (0.00 sec)
```

> **HAVING COMMAND**:

It's use as such to apply the conditions indirectly which is not done with the help of where command as while you are dealing with the **GROUP BY** in sql. So for the sack of that purpose you have to use the HAVING to filter out of data or attributes as you want from the table.

• Practical Implementations:

```
mysql> select AVG(salary) FROM employee GROUP BY JOB HAVING COUNT(dep_no)>1;

+-----+
| AVG(salary) |

+-----+
| 16900 |

+-----+
1 row in set (0.01 sec)
```
